PROFILE

Web developer with five years at a Winnipeg design studio building custom WordPress sites in PHP and ACF — hand-written themes with both native Gutenberg blocks and ACF blocks, rather than page-builder templates — for enterprise and public-sector clients. Accessibility was a standing requirement rather than a final check: every build was assessed against WCAG 2.2 AA, with findings documented and remediation carried through to closure. Works closely with designers and cares about what ships looking the way it was drawn. Available immediately for remote, hybrid, or Winnipeg on-site work.

EXPERIENCE

Web Developer | Vincent Design Inc., Winnipeg, MB | January 2023 – July 2026

- Built custom WordPress themes in PHP for agency clients, developing both native Gutenberg blocks and ACF blocks by hand so editors got exactly the components a design called for, with no page-builder bloat underneath.
- Ran WCAG 2.2 AA accessibility conformance audits for clients including TELUS and public-sector organizations: assessed each property against the published standard, documented every finding, and tracked remediation through to closure.
- Delivered the TELUS Reconciliation Report as a custom WordPress and ACF build — a high-visibility corporate publication where WCAG conformance and data integrity were both contractual requirements.
- Built a multi-region partner directory and interactive mapping platform for an Indigenous-led grantmaking organization on WordPress and ACF, designed around keyboard navigation and inclusive wayfinding.
- Rebuilt Perimeter Aviation on a CMS-driven architecture so staff could maintain their own content without going back to a developer. Translated designers' work into responsive, mobile-first builds, holding the line on contrast, focus states and semantic structure through to launch.

Front-End Developer (Freelance) | Self-employed, Winnipeg, MB | August 2021 – December 2022

- Built and maintained WordPress sites and e-commerce storefronts for small business owners, handling scope, delivery and handover directly with the client.

Special Finance Manager | Birchwood Credit Solutions, Winnipeg, MB | November 2018 – July 2021

- Earlier career in consumer lending: adjudicated credit applications on a dealership group's in-house book and verified income and identity documentation. Testing a file against a written standard is the same habit the accessibility work runs on.

TECHNICAL

PHP · WordPress · Advanced Custom Fields (ACF) · native Gutenberg block development · ACF blocks · custom theme development · HTML · CSS / SCSS · JavaScript (ES6+) · MySQL · Git · Figma handoff · WP Engine · Flywheel · responsive and mobile-first layout

Accessibility: WCAG 2.0 / 2.1 / 2.2 AA conformance auditing · ARIA patterns · keyboard navigation · contrast and focus management · semantic structure · remediation tracking

Also worked with: React, Next.js, TypeScript, Tailwind CSS

TRAINING

Web Accessibility Training — Deque University · Modern PHP: Beginner to Advanced (Udemy) · Complete Full-Stack Web Development Bootcamp (Udemy)

High School Diploma — Crocus Plains Regional Secondary School, Brandon, Manitoba, 2013 · Bilingual English and Spanish (C2)
